Support

Coating Service

Need coated substrates before your own tool is in place, or more capacity than your line can deliver? We coat your substrates on Evatec equipment in our own facility, using our thin film process know-how.

Your need

Do you find yourself answering yes to any of these?

- Your tool is on order, but you already need coated substrates to qualify your product.
- Demand has spiked and your current coating capacity cannot absorb it.
- You want to prove out a thin film process on real substrates before committing to equipment.

Our service

Evatec's Coating Service gives you access to our in-house production and development equipment, operated by our own process engineers at our facility in Switzerland. We coat on a per-project basis, either with a standard process from our portfolio of Best Known Methods (BKMs) or with a process developed together with you for your material and application.

Your substrates are handled confidentially under NDA and returned with a report covering the layer produced and the process parameters used. Where you later invest in your own Evatec tool, the same process transfers to your fab.

Your benefit

- Start qualification or production before your own tool is installed.
- Cover peak demand without investing in additional capacity.
- Access thin film technologies you do not have in your own facility.
- Take a proven, documented process with you when your own tool goes live.

Want to know more?

Coating Service works well on its own and as a natural step alongside Application Support and Ramp-Up Support once your own tool arrives.
